

VAIBHAV BALGI

UI/UX Designer · vaibhavbalgi3456@gmail.com · +91 7829247724 · [GitHub](#) · [LinkedIn](#)

EDUCATION

B.E. in Computer Science & Engineering

Intermediate — Dr. A.V. Baliga Arts & Science College
Matriculate — Karnataka Public School, Kumta

CGPA: 8.58 | 2022 – 2026
89.16% | 2020 – 2022
96.16% | 2015 – 2020

SKILLS

Design: Figma (Components, Auto-Layout, Variants, Smart Animate, Plugins), Wireframing, Prototyping, Micro-interactions

UX Methods: User Journey Mapping, User Flows, UX Audits, Heuristic Evaluation, Funnel Analysis, A/B Testing, Information Architecture

Languages: C, C++, Java (Intermediate), Python (Basic), HTML, CSS, JavaScript (Basic)

Databases: SQL, MongoDB (Basic)

Tools: Figma, Jira, Git, GitHub, Loveable

UX DESIGN PROJECTS

PayZen — UPI & Digital Payments Platform UI

- Designed the UI for PayZen, a smart web platform solving reward visibility and money management problems across UPI, wallets, and digital payment ecosystems in India using Loveable.

E-Commerce UX Audit & Conversion Optimisation

- Audited product page, cart & checkout using Nielsen Norman heuristics; produced Before/After mockups and A/B test proposals targeting measurable conversion uplift.
- Redesigned checkout flow via funnel analysis & cognitive load reduction; improved shipping transparency and proposed frictionless guest checkout path.

Component System & Micro-Interaction Design

- Built scalable Figma component library (buttons, inputs, all states) with Auto-Layout & Variants; prototyped Smart Animate micro-interactions for handoff-ready delivery.

E-Commerce App Onboarding & Information Architecture

- Defined mobile app IA (Home, Categories, Cart, Profile); designed 3 onboarding screens with progressive disclosure and Smart Animate transitions.

User Journey & Flow Mapping — Online Course Enrollment

- Created parallel Journey Map (emotional) and Flow Diagram (task-based); delivered comparative report identifying pain points and task bottlenecks.

TECHNICAL PROJECTS

Autonomous Drone Detection & Targeting System

2024 – 2025

Python · OpenCV · YOLOv11m · Arduino · Embedded C

- Built a prototype using OpenCV and YOLOv11m to detect aerial objects and track them with an Arduino-controlled pan-tilt mount, achieving 91.5% precision and 94.2% mAP@0.5 in real-time.

Toxic Comment Detection System

2024

Python · NLP/ML · Flask · HTML · CSS · JavaScript · Git

- Built an NLP/ML system to accurately classify harmful, offensive, and abusive online content.

Chat Guardian

2024

Python · Flask · HTML · CSS · JavaScript · Git

- Implemented real-time protection against inappropriate language and cyber threats in online chat environments.

Online QR Menu System

2024

HTML · CSS · JavaScript

- Designed & developed a mobile-first QR menu for restaurants with clear visual hierarchy and fast scan-to-view flow.

ACHIEVEMENTS & CERTIFICATIONS

- Presented Autonomous Drone Detection System at Nitte Young Innovators Summit 2025 (AIC NITTE Incubation Centre).
- Published & presented research paper at ICRAI 2025, Karnatak University, Dharwad on YOLOv11-based real-time drone detection.
- Participated in Smart India Hackathon 2024, collaborating on innovative solutions for real-world problems.
- Contributed to Adobe India Hackathon — ideation, knowledge-sharing, and solution design.
- Won 1st Prize at college-level Onam Festival Reel Competition for video production and editing.
- Participated in OpenLoop 2026 Hackathon organised by Yenepoya School of Engineering & Technology, Mangaluru (Apr 2026).
- Participated in TCS TechBytes 2026 — Statewide Engineering IT Quiz, organised by TCS & BITES, Government of Karnataka.
- Google AI Essentials — Coursera (Feb 2025) · Introduction to MongoDB (May 2025) · C Programming — MicroDegree (Jul 2022)
