

E-Commerce UX Audit Report – Flipkart

Introduction

This report analyses the user experience of Flipkart to identify usability issues affecting conversion rates. The focus is on the product page and checkout flow.

Objective

- Identify UX issues
- Evaluate product page clarity
- Analyse checkout flow
- Improve user experience

Issues Observed

1. Product Page Issues

- Excessive information causing clutter
- Weak visibility of “Buy Now” button
- Important details not highlighted properly
- Poor content organization

2. Checkout Issues

- Login required at early stage
- Multiple steps in checkout
- Long address form
- No progress indicator

3. Key UX Problems

- High cognitive load
- Poor visual hierarchy
- User friction in checkout
- Lack of clear guidance

Conclusion

The current UX design introduces friction and reduces efficiency. Improving clarity, simplifying layout, and optimizing checkout flow can significantly enhance user experience and increase conversions.
